

Title

Examining university graduates' entrepreneurship through the design and application of an OR survey model

Abstract

Promoting and supporting entrepreneurship is nowadays among the main priorities of governments and employment policy makers. This work concentrates on the analysis of all principal parameters describing university graduates' entrepreneurial activities. A survey model has been designed for this purpose and a structured questionnaire was addressed to a large representative sample of self-employed graduates. The impact of factors such as gender, department and faculty of origin, place of residence, marital status, and type of secondary education, degree grades and postgraduate studies, on main entrepreneurial issues is thoroughly examined with the use of appropriate statistical analysis.
